Click on the blue, underlined text to go to its linked reference.

**QUESTION:** How do you delete things that you put on top of Internet Page that begin with “www...”? I don’t know what you call this, but there is always a list of what Websites you have been to. It lists it for about, I believe, 20 or so sites you already visited.

**ANSWER:** It’s called the “History” of sites you’ve visited.

Simply put, there are two ways to delete them: The Internet Explorer way or by using a cleaning program.

1. In Internet Explorer, you can find the sites that you have typed into the Address Bar, by clicking on the downward arrow next to the current website listed (**Figure 1**). Sites which you visit as a result of clicking on a link in the current Website are not listed in the history.

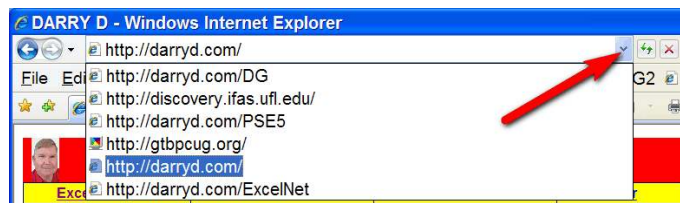

Figure 1

2. To remove that history (**Figure 2**):

- 1 Left-click on “Tools.”
- 2 Left-click on “Internet Options.”

Figure 2

3. In the Internet Options window (Figure 3), Left-click on the “Delete” button.

4. In the Delete Browsing History (Figure 4), Left-click on the “Delete History” button. You can delete other items as shown in that figure.

Figure 5

5. In the Delete History confirmation window, touch the *Enter* key, on the keyboard, or click on the “Yes” button.

6. When that window closes, Left-click on the “Close” button in the Delete Browsing History window.

7. Left-click on “OK” button in the Internet Options window.

## EASIER WAY

A much easier way is to download and to use a deletion program like CCleaner or ATF Cleaner.

CCleaner is a system optimization tool that removes unused and temporary files from your system — allowing Windows to run faster, more efficiently and giving you more hard disk space.

ATF Cleaner works much the same way as CCleaner, but deletes all prefetch files as well.
