Click on any blue, underlined text to go to its linked reference.

This is how to save images for posting on a website using Photoshop Elements 6-7. (While these steps may work in previous versions, they have not been tested in those versions.)

1. Create and save an image (**Figure 1**). You should save it at the size you wish it displayed on the web, however you can change its size in Step 3.

The image used in this lesson is a 2.25 Mb file at 1024x768 pixels (**Figure 2**).

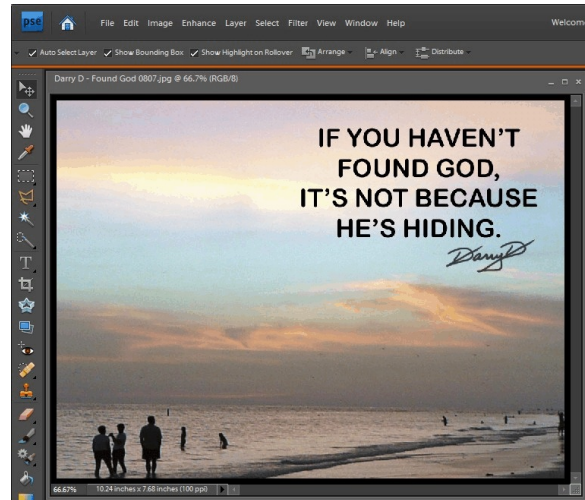

Figure 1

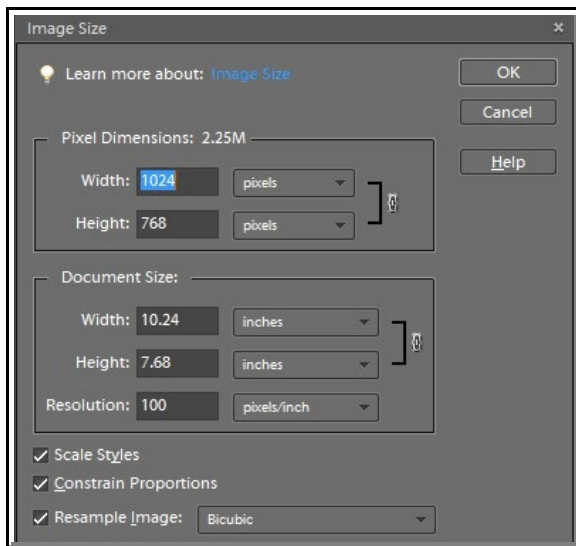

Figure 2

2. From the Menu-Bar, select **File** ► **Save for Web** (**Figure 3**).

3. The “Save for Web” window appears (Figure 4). You may change the size in this window if you wish (inside the red square). Standard sizes for the web are:

- ☆ 640x400 pixels
- ☆ 800x600 pixels
- ☆ 1024x768 pixels

NOTE: Smaller sizes are common, but larger ones are rare on websites.

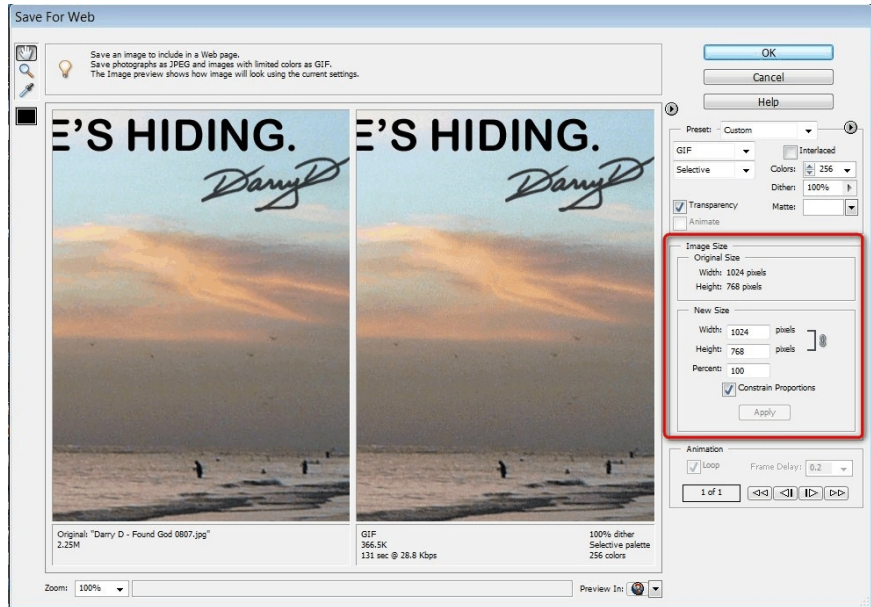

Figure 4

4. The “Save Optimized As” window appears (Figure 5). Programs like MS FrontPage save all your images into a folder “Images” within your Websites folder, i.e., in Windows Vista it is: *C:\Users\[User Name]\Documents\Websites\Images*.

That’s all there is to it.
